Rachiele.com

"The sink is the hardest working object in the kitchen. It is where the meal begins and where the day ends. Most are designed to be looked at. Ours are designed to be used. For twenty-seven years I have built sinks around the person standing in front of them. How they cook. How they clean. How tall they are, and where their hands naturally fall. Every dimension follows from that, and nothing is decided by convention.

We are not building a fixture. We are building the one piece of the kitchen your client will touch more than any other, every day, for the rest of their life."

– Dino Rochicke

*Owner / Founder*

# About Rachiele

*The Busiest Square Foot in the Kitchen*

A sink is not a fixture. It is the one surface in the kitchen that is touched every single day, by every person in the house, for as long as the house stands. We have spent twenty-seven years designing around that fact.

The original workstation sink was built here, in Apopka, Florida, in 2010. Nearly ten patents have followed. Every sink we make is still built to order, by four artisans, in a shop small enough that fewer than four hundred leave it each year.

Our business has grown almost entirely through clients who come back and the people they send us.

When you call, a person answers. Most days that person is Dino Rachiele. There is no sales team, no script, and no menu to navigate, because the person who designs your client's sink should be the person who answers the question about it.

*Aerospace Experts Have Praised Our Precision Welding For Its Exceptional Quality*

# Our Custom Sink Process

***Six Steps, and You Approve Every One***

Every Rachiele® project begins with a conversation, not a catalog. A sink built around how someone actually cooks will always outperform one built around a floor plan.

**One. The conversation.**
You and your client speak directly with Dino Rachiele. How they cook, how they clean, who else uses the kitchen, how tall they are. There is no sales team and no script, and the call takes as long as it takes.

**Two. The drawing.**
We produce a detailed dimensional drawing before anything is built. Revise it as many times as you need.

**Three. Your approval.**
Nothing moves until you approve the drawing. If the project changes direction before that point, cancel for a full refund. No questions, no restocking fee.

**Four. The calendar.**
You set the pace. We reserve a completion date on our production calendar that fits your construction schedule, not ours.

**Five. The build.**
Four artisans. Over ninety percent of the work is done by hand. Each one signs the sink when it is finished.

**Six. Delivery.**
The sink arrives crated and protected, with a personal note from Dino inside.

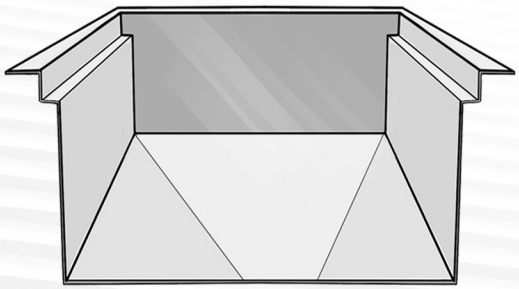

**If your client is not thrilled when the crate is opened, we refund the purchase in full, pay the return shipping, and send a check for $500 for the inconvenience. The warranty is lifetime, transferable, and requires no paperwork.**

*60” - 316L Stainless Steel Sink With Fused Brass Apron*

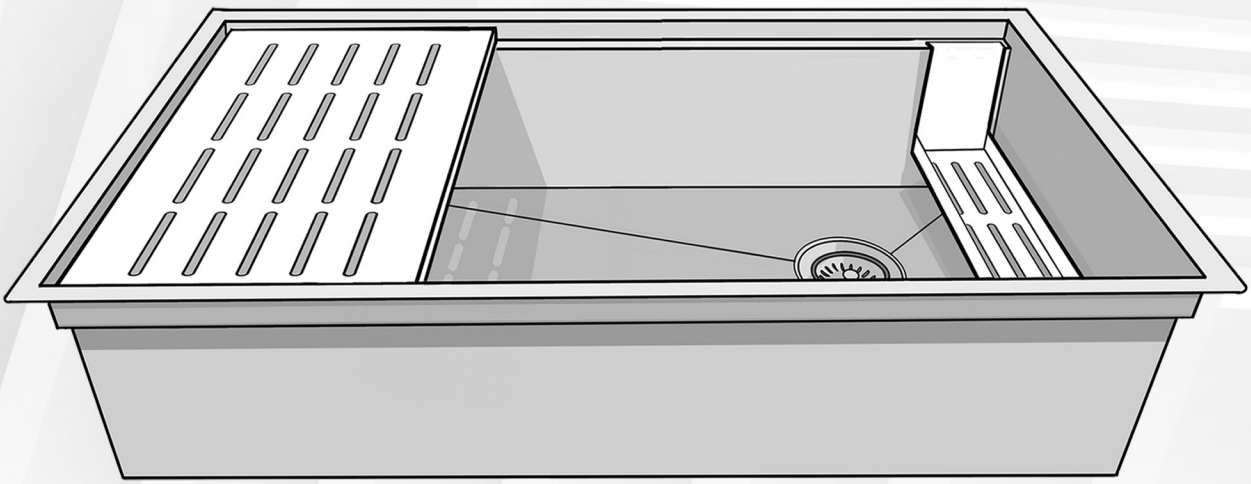

# Signature Series

Our original workstation design, introduced in 2010. The industry has copied it ever since. 16-gauge 316L surgical-grade stainless steel, or 14-gauge copper, brass, and bronze. Stainless steel, brass, and bronze carry MicroWelded and micro-polished corners. Copper is fused radius.

*Signature Ledge Cross Section*

A *Signature Series* sink at a given size fits a cabinet of that same size. The ledge is eighteen inches wide above the step. Room for a half sheet pan beside a cutting board.

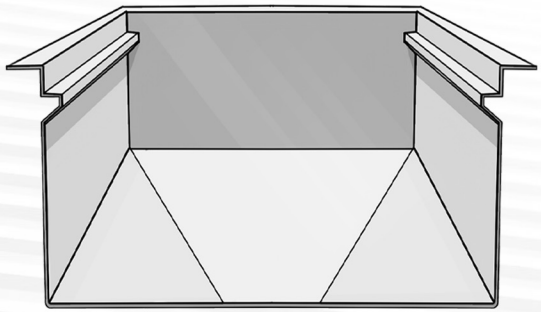

*Undermount Sink Featuring Our Original Signature Series Workstation Ledge*

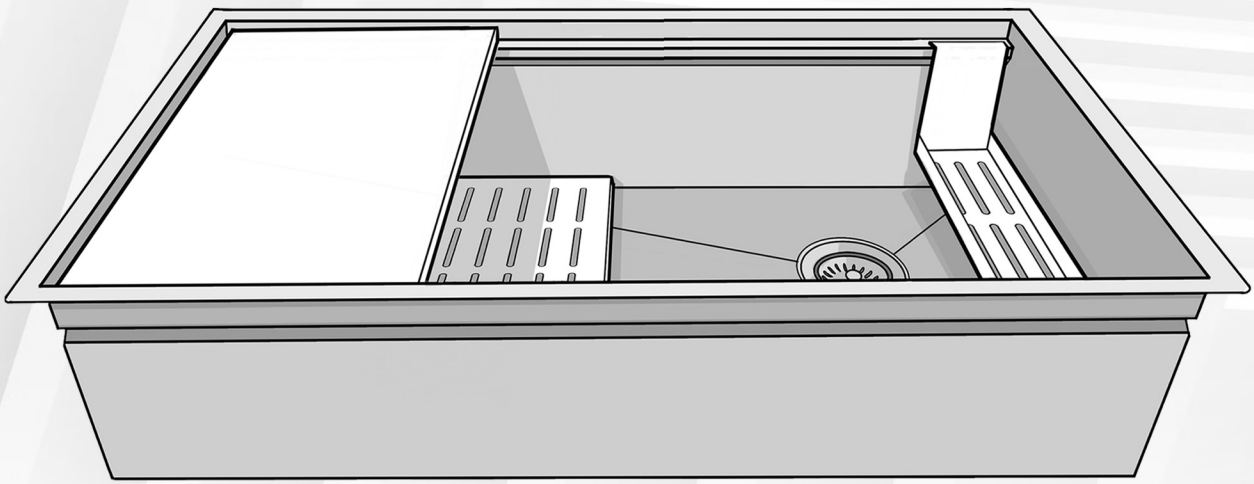

# NexGen

## TRADEMARK DESIGN

Our most popular design, introduced in 2018. The NexGen ledge sits a half inch out from each side wall, then steps back in to meet the true bowl wall below. That half inch does the work. Rest a dish rack or cutting board on the ledge and it drains straight into the bowl. Use a slotted insert and vegetables strain while the rest of the sink stays open. Or skip the ledge entirely. A half sheet pan or steam oven tray drops past it and sits flat on the bottom. Eighteen inches of working width, on the ledge or on the floor.

*NexGen Ledge Cross Section*

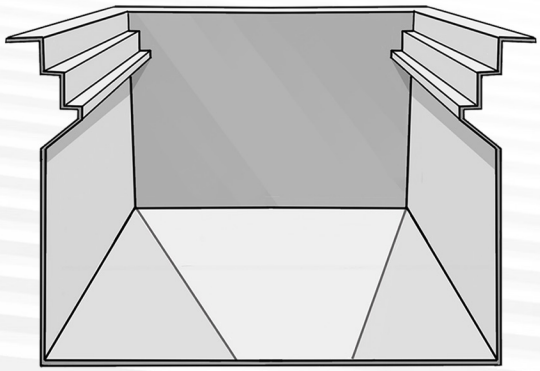

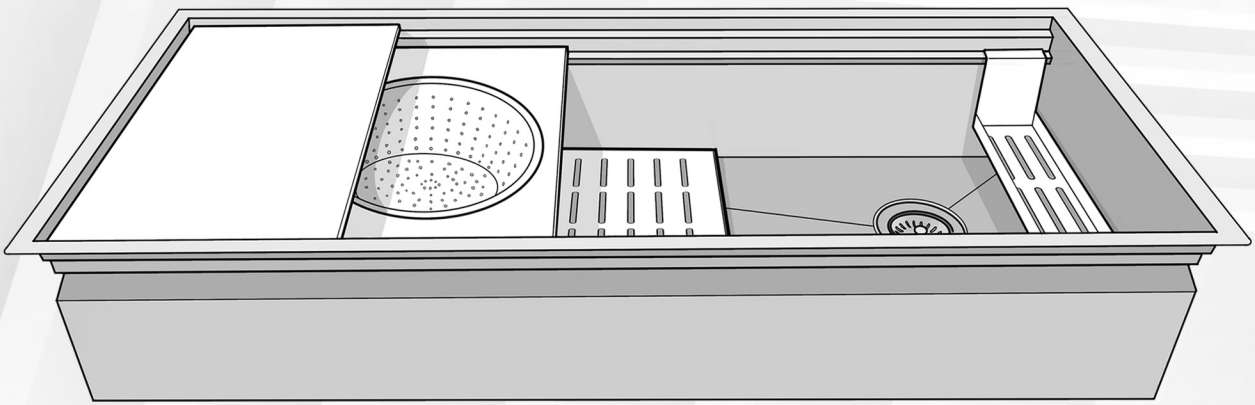

*60” Custom Copper Undermount Sink Featuring A NexGen Workstation*

# PARAGON™

Our most advanced workstation, built on everything we learned from Signature Series and NexGen. Paragon adds a second ledge. Three working levels instead of two: upper ledge, lower ledge, and the true bottom of the sink. Use one at a time, or all three at once. Both ledges sit below the flange, so water never pools at the countertop joint. Accessories can be ordered for either ledge, or sized to slide under and over each other for layered prep. The most work surface we have ever built into a single sink.

*Paragon Ledges Cross Section*

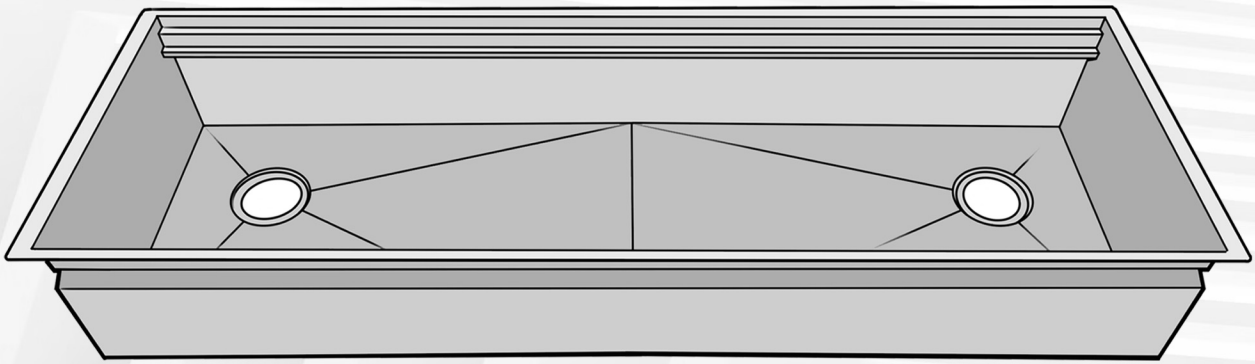

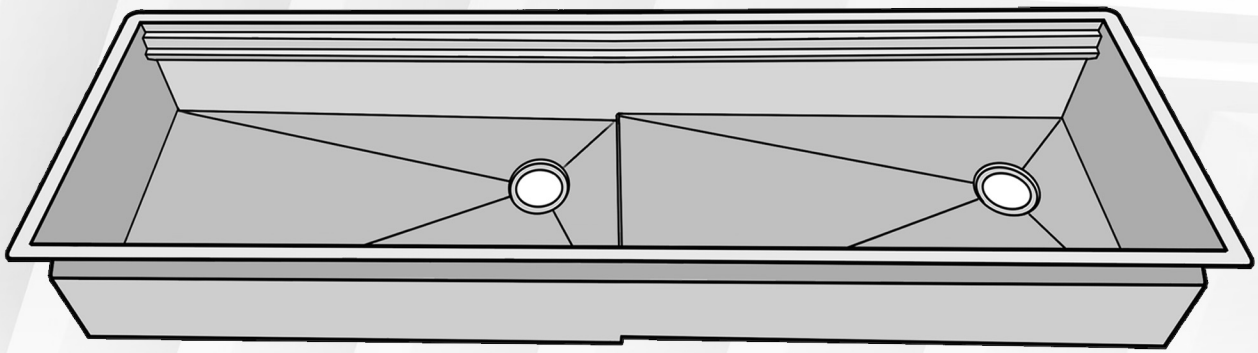

*Millennia Textured Stainless Steel Sink Featuring A Paragon Workstation*

# Harmony
BY RACHIELE®

Harmony is our single-bowl, dual-drain design, built to simplify how a kitchen gets used, alone or together. Prep on one side, clean on the other, each with its own dedicated drain, so tasks never overlap and no one fights over the faucet. It's equally comfortable for left-handed or right-handed use, and equally suited to a solo cook working in stages or two people working the sink at the same time. Built for families, couples, or anyone who values speed, cleanliness, and teamwork in the kitchen.

*Left/Right Dual Drain Option*

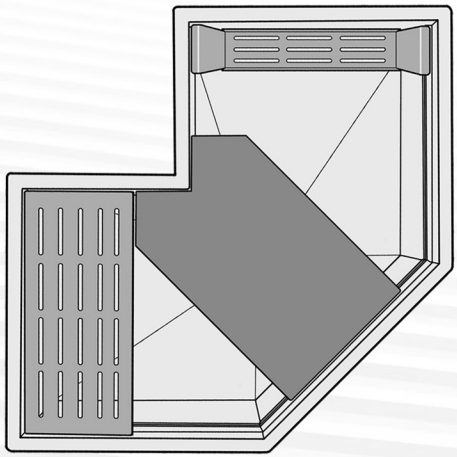

*Right/Right Dual Drain Option*

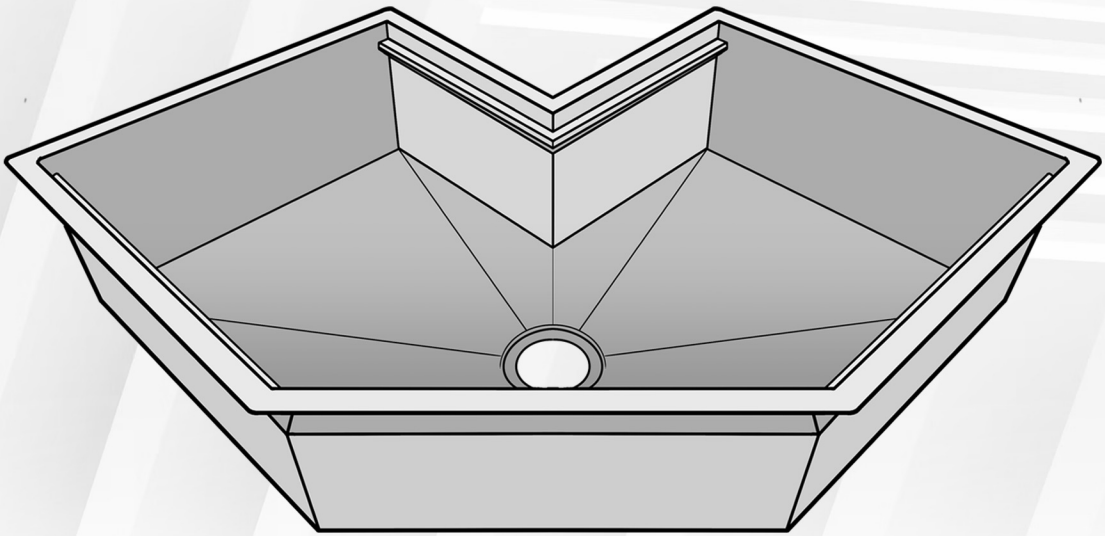

*Stainless Steel NexGen Sink With A Right/Right Harmony Bowl*

# Corner

Rachiele custom corner sinks solve the biggest problem with typical double bowl butterfly designs, a dead zone where the two bowls meet, and two bowls so small that neither one is genuinely useful. Ours is built as a single bowl instead, sized and shaped to make full use of a corner cabinet's real footprint rather than working around it. Available with the Signature Series step or the NexGen ledge system, so the same accessory versatility found in our other designs works here too. Built for either a diagonal or a true 90° corner cabinet.

*Custom Corner Sink Accessories*

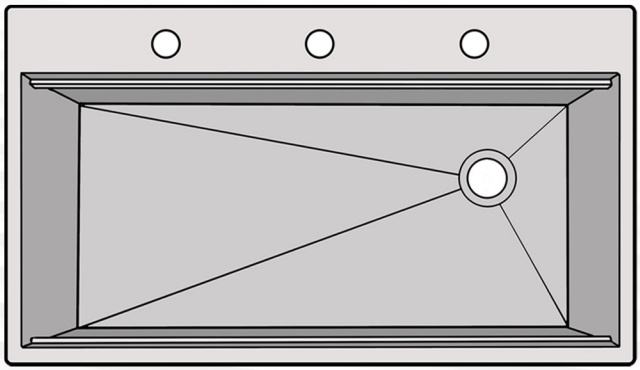

*Stainless Steel Custom Corner Sink With Accessories*

# Top Mount

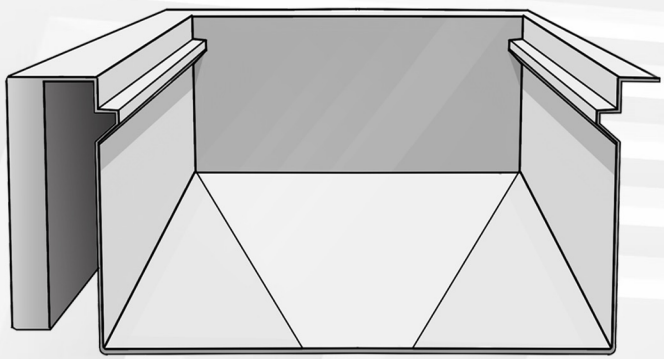

Most top-mount sinks we build are simply replacing an outdated or damaged undermount sink. Some are ordered for a different reason: the flange sits directly over the countertop, so the stone itself is never exposed to impact. Bang a pot against any corner and the sink takes the hit, not your countertop, a real advantage for anyone with a stone that's expensive or difficult to replace.

*Top Mounted Sink With Rear Deck*

# Retrofit

Our patented retrofit farmhouse sink solves a cracked countertop differently. A one-inch channel behind a shortened apron lets it drop directly into an existing cutout, and simple cuts in front of and behind the old sink remove the cracked stone. If the crack runs further back, the rear faucet deck is built to extend past it and stop the progression. Available in all metals and built to your exact cabinet dimensions, with most installations completed in a single day.

*Retrofit Farmhouse Cross Section*

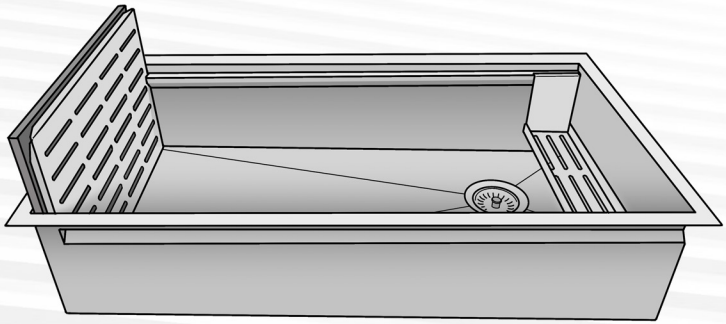

*Custom Copper Top Mounted Retrofit Farmhouse Sink*

# Special Features

*Culinary Dock™*

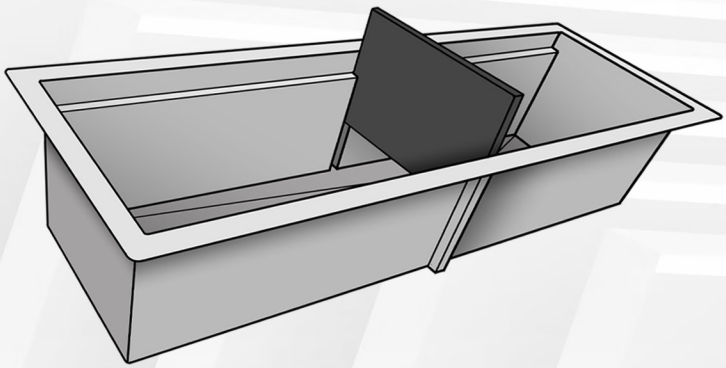

A dedicated slot at the end of the sink where the cutting board and grid stand upright when they are not in use. They drain into the sink, they stay out of the way, and they never take up counter space or a cabinet.

*NexGen Workstation Ledge With A Built-In Culinary Dock*

*Entertainer Bowl Divider™*

The Entertainer is a custom, open bar sink. Drop in the divider to create two work areas, or lift it out and use it as a cutting board. The grid serves as a drying rack or prep area, so glasses drain over the sink instead of the bar top. Add ice to one side and melted water flows beneath the divider to the drain.

*Signature Series Ledge With Entertainer Bowl Divider*

*Custom Copper Split Ledge Entertainer Sink With Bowl Divider*

# Premium Metals

***Hand Finished Stainless Steel***
We use domestic 316L surgical-grade stainless steel - the same material trusted in surgical instruments and marine environments. Handcrafted with our MicroWelding process and micro-polished to aerospace standards, creating a true zero-radius corner with no visible seam, no crevice, and no edge where debris can settle.

***Weathered Copper***
Our copper sinks are handcrafted with domestic cold-rolled copper, engineered for a lifetime of beauty and performance in your kitchen. These sinks develop their finish naturally. The patina process is applied repeatedly until the metal darkens to the desired tone, then rinsed and allowed to settle. The result is a finish that is part of the metal rather than applied to it, one that improves with honest use over time.

***Burnished Brass***
Sinks crafted using domestic solid brass offer a distinctive balance of performance, durability, and visual warmth that is difficult to achieve with other materials. This unlacquered living finish gradually deepens in tone, creating character and depth that reflects how the sink is used. Many homeowners appreciate that minor marks blend into the evolving surface rather than remaining visually prominent.

***Burnished Bronze***
Bronze has been valued for centuries in fine architectural and artistic applications because of its strength, stability, and unmistakable visual depth. The unlacquered alloy we use is a rare, high-copper domestic bronze selected specifically for its ability to develop a rich, warm tone that cannot be replicated by surface treatments or coatings. Its warmth complements natural stone, wood cabinetry, and other architectural elements often found in well-designed kitchens.

***Inside the bowl, no coating survives a kitchen sink. Every interior finish lives in the metal itself.***

# Custom Patina

At Rachiele, our patinas are not mere finishes; they are distinct works of art, each with its own character and story. Crafted through a meticulous, proprietary process that blends time-honored techniques with innovative design, these patinas transform every Rachiele sink into a unique masterpiece. Our patinas are a testament to our commitment to craftsmanship, artistry, and the belief that every detail in your home should be a reflection of your unique style and personality. The apron face is the one surface on which a patina can be held permanently. It never meets a pot or a scouring pad, so we lock the finish in with an automotive clear coat. No change, no maintenance beyond a damp cloth. Seven standard finishes, available in copper, brass, and bronze. If a client wants something else, we will develop it.

# Accessories

Our workstation accessories are made from the same materials as our sinks and cutting boards, and each one is built to fit your specific sink. Built to do several jobs. Some accessories recess down flush with the cutting board so your workstation stays level as you work. In stainless steel, the multi-use grid works as a trivet for a hot pot straight off the stove. In bronze, brass, or copper, the same grid pulls heat fast enough to thaw food in a fraction of the usual time. Set it on the bottom of the bowl in any metal and it holds a colander above the drain so you can pour off pasta water without backwash, or use its slots to hold your knives and cleavers safely while you work instead of balancing them across the sink.

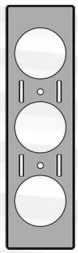

*12” Multi-use Grid*

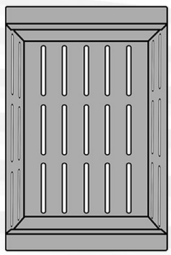

*15” Multi-use Grid*

# Waterstone Faucets

We take great pride in being authorized dealers of Waterstone Faucets, the premier faucet manufacturer in the United States. Because of their exceptional craftsmanship and lifetime functional warranty, we exclusively recommend them as a complement to our custom sinks. Our expert team will help you pair a custom sink with a matching faucet to enhance the unique look and feel of your kitchen. Standard and split finish options are available.

***Comfort and Convenience***
The 11" reach conveniently brings the water closer to you, enhancing ease and comfort during use.

***Effortless Reach for Large Sinks***
The extended reach design ensures that even a 60" sink can be easily sprayed out with just one faucet, simplifying your kitchen tasks.

***Durable Elegance with Assurance***
Built to last with high-quality materials, these faucets add a touch of sophistication to any kitchen decor and come with a lifetime functional warranty.
