

## A revolutionary solution to an age old kitchen design problem!

**The Problem:** Almost every kitchen design currently wastes 15 to 24 inches in valuable base cabinet space storing TRASH.

A design by nationally recognized kitchen designer, Dino Rachiele

It's about time a sink cabinet did some work!

A Kitchen Designers Dream

## Save Space - Save Money - Save Steps

Your kitchen designer will be able to eliminate a costly "trash" cabinet from each design, offsetting a significant amount of the cost of the sink.

The sink is where you generate most of your trash. Why dribble over the floor or countertop to get to a remote trash receptacle?

Most 33" or larger cabinets will accommodate a double pull out trash unit.

The Smart Sink Cabinet in conjunction with a Rachiele sink is the ultimate in kitchen design

Talk with your kitchen designer to see if he or she can make this happen in your kitchen using the cabinetry you are working with.

This space saving and convenient innovation can only be accomplished with any Rachiele sink due to the rear corner drain and 8" sink depth
